

Removal of Adhesive Labels

Instructions

We are constantly working with our vendors who provide the product labels to get the most agreeable and removable adhesives possible. These efforts have received mixed success. Some of our products may contain adhesive labels that are difficult to remove. Our product development department is currently looking into a resolution but if you find yourself with the challenge of removing these labels, please try the removal method below.

Olive Oil Method

We have found the best way to remove the sticky residue from our product labels is by using olive oil.

1. Apply a liberal amount of oil to the sticky surface and massage it in. The oil combines with the sticky substance and alters it making it no longer sticky.
2. Wash off the resulting sludge with soap and water. This is safe and non-toxic which is perfect for food-related tools.

For particularly stubborn adhesive, allow the oil to sit overnight on the area to allow for penetration into the hardened adhesive.

We apologize for any inconveniences.

Please contact us if you need more information.
